Shearer Three /Four Sides Pull Out Basket

Installation manual

Shearer Series

HIGOLD®

Leading design Perfect experience. The beauty of industrial design!

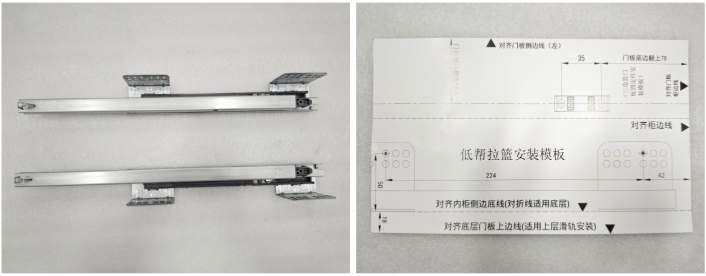
STEP

- 01 -

Accessories List

The minimum depth of the basket is 465mm, and the minimum installation height is 125mm. The width should be selected according to the cabinet size. Please pay attention to the cabinet size when installing.

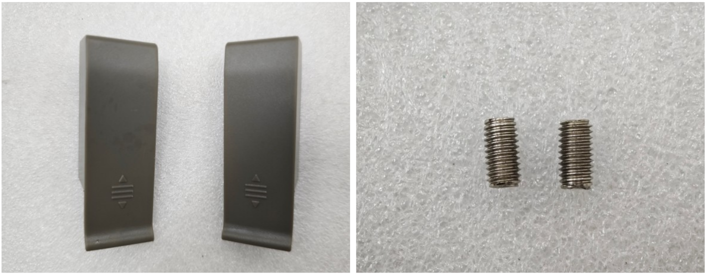
Three Sides Basket*1 or Four Sides Basket*1



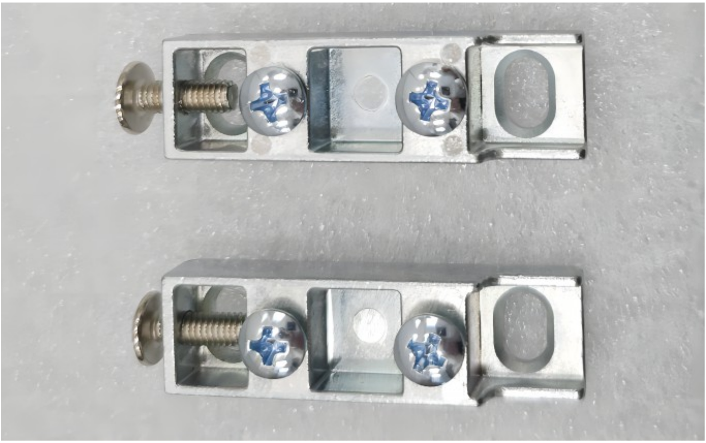
Slide rail *2, Install template *1

Slide rail dust cover * 1, self-tapping screw pack * 1 (16 ST4.016 self-tapping screws for the three sides basket, 12 ST4.016 self-tapping screws for the four sideds basket)

The three sides basket has the following additional accessories compared with the four sides basket



Door panel decoration cover *2, Fully threaded screw *2



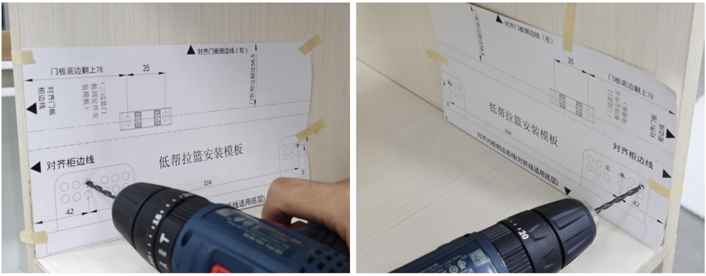
Door panel fastener*2 (Two M4*12mm screws and four M4*10mm screws are pre-installed on the door panel fastener)

STEP

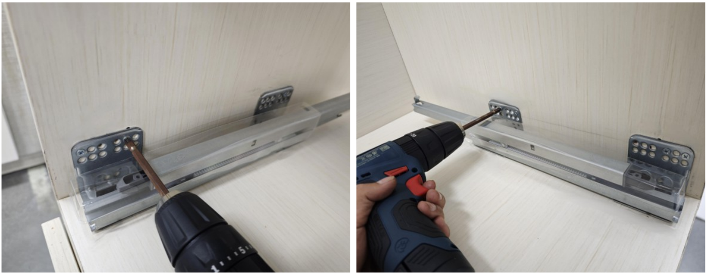
- 02 -

Installation

# of the slide rail



Use the bottom edge of the cabinet and the door edge as the reference, and use the installation template to pre-drill holes (left/right).



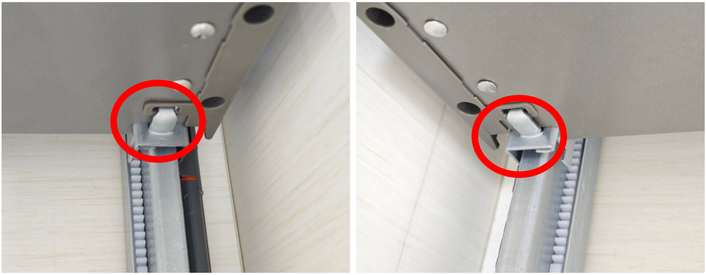
Install the slide rails (left/right). Align the slide rail fixing holes with the pre-drilled holes, and lock them with ST4.0*16mm self-tapping screws (note to use the rail dust covers).

The installation method for the slide rails of the three sides basket and four sides basket is the same. The installation of the slide rails is completed.

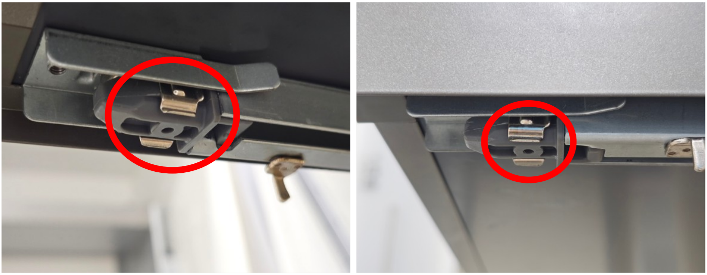
STEP

- 03 -

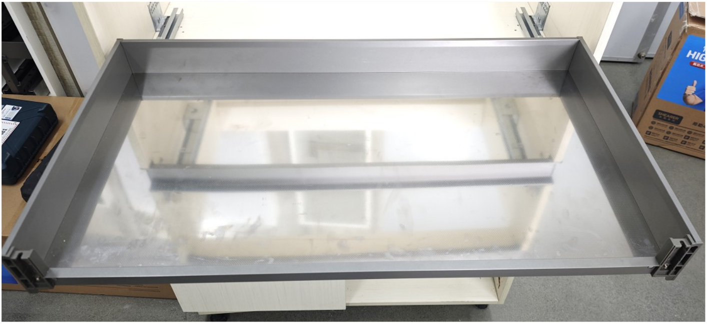
Installation of the Three sides basket



Insert the rail tail hook into the rear groove of the three sides basket (left/right).



Then, use the clips at the bottom of the basket to clamp the front ends of the guide rails (left /right).

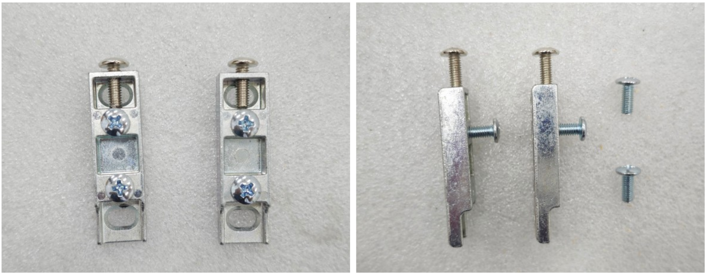


The main body of the three sides basket is installed.

STEP

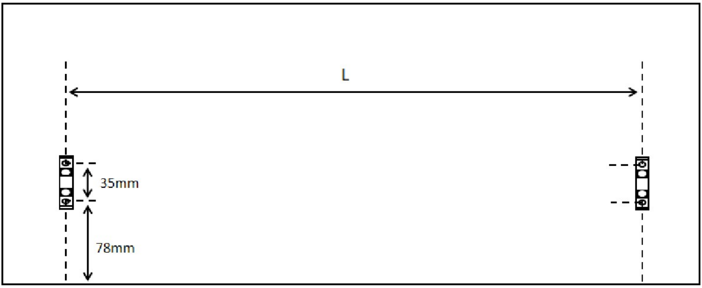
- 04 -

Installation of the three sides basket panels



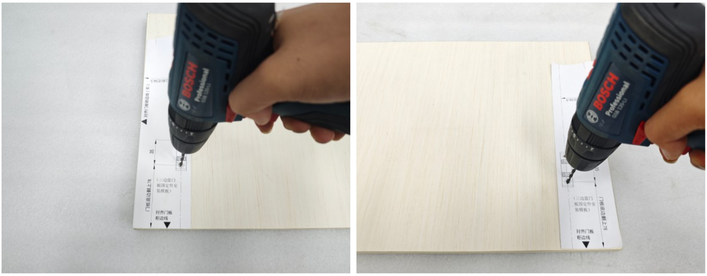
Pretreatment of door panel fixings:

Remove the M4*10mm screw at the bottom, and unscrew the upper M4*10mm screw and M4*12mm screw to a certain length.

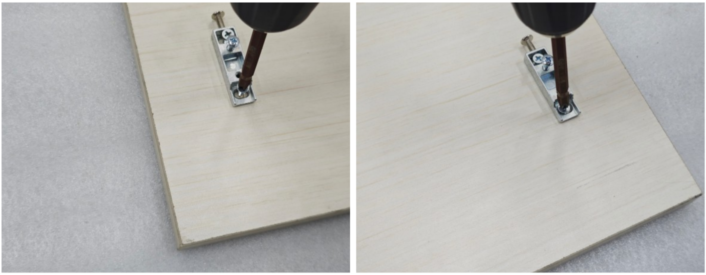


Cabinet W/mm	900	800	750	700	600
Drilling distance of 2 door panel fasteners L/mm	787	687	637	587	487

Standard length door panels can be pre-drilled directly using the installation template, while non-standard length door panels need to be pre-drilled after precise measurement of the drilling distance L between two door panel fasteners.

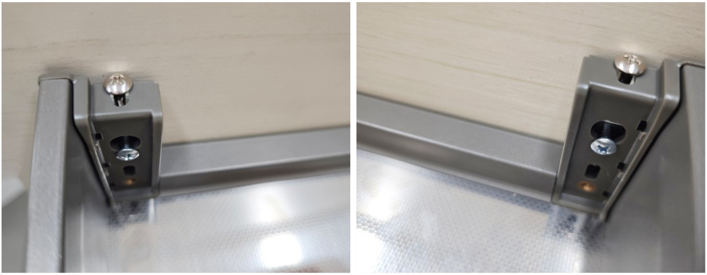


Use the standard length cabinet door panel, take the bottom edge of the door panel as the reference, and use the installation template to pre-drill holes (left/right).

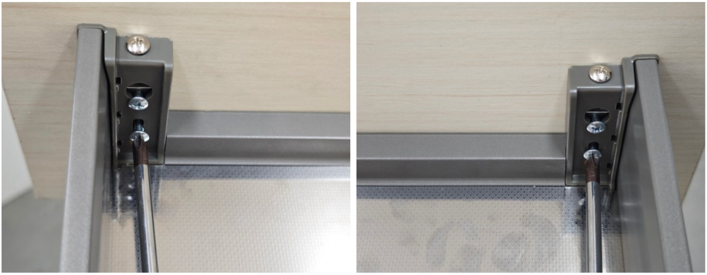


Install the door panel fasteners (left/right).

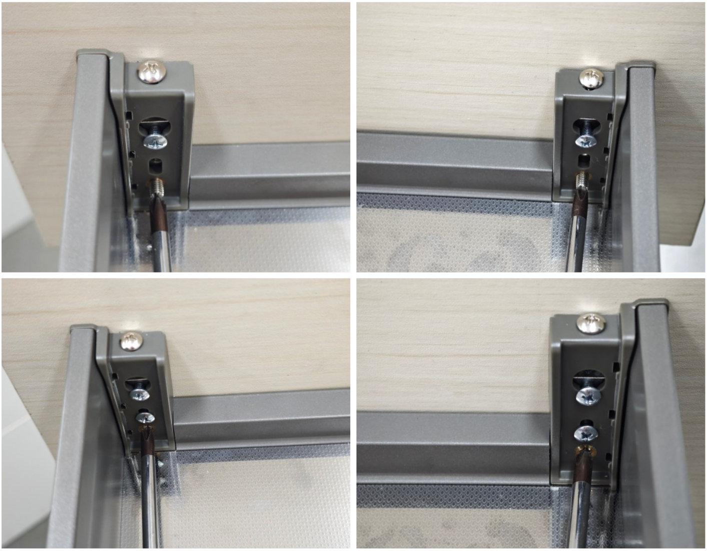
Align the door panel fixing holes with the pre-drilled holes and lock them with four ST4.0*16mm self-tapping screws.



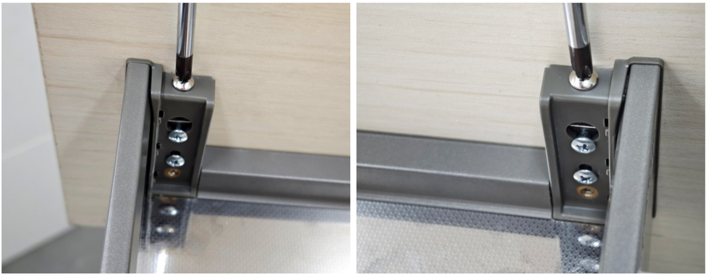
Hang the door panel into the hole of the three sides basket corner fittings.



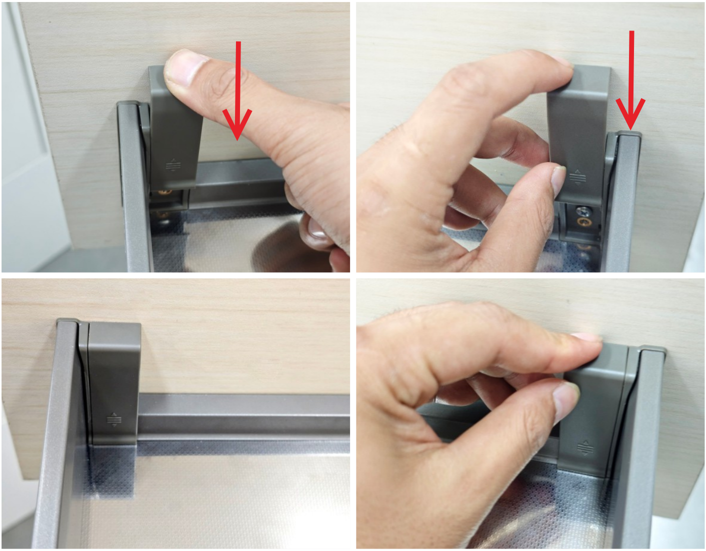
Lock the two pre-removed M4*10mm screws into the corner fittings (left/right).



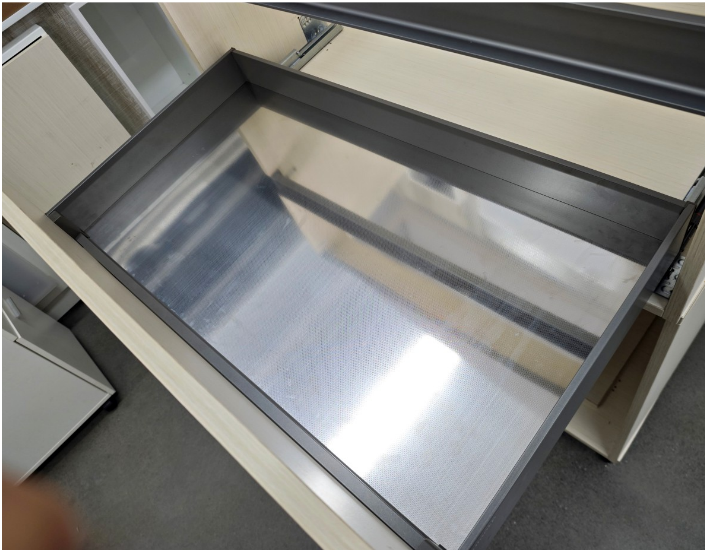
Lock the fully threaded screws into the corner fittings of the three sides basket (for adjusting the door panel).



Adjust the upper and lower M4*16mm screws and fully threaded screw screws to ensure the door panel fits tightly and flush with the cabinet, then tighten the four M4*10mm screws to secure the door panel.



Install the door panel decorative cover and push it into the slot from top to bottom.

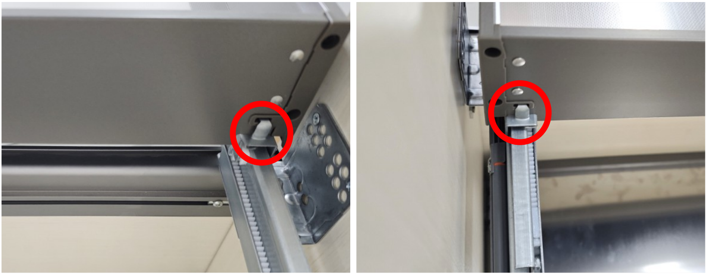


The low top three sides basket is installed.

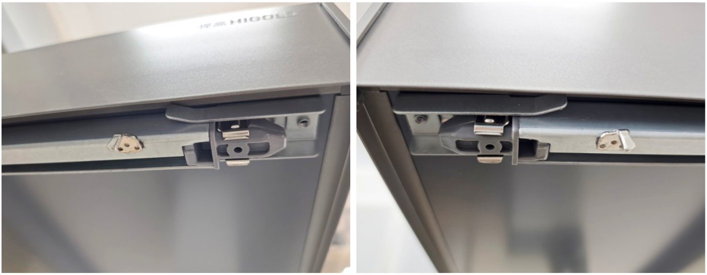
STEP
- 05 -

Installation of the

four sides basket



Insert the rail tail hook into the rear groove of the four sides basket (left/right).



Then, use the clips at the bottom of the basket to clamp the front ends of the guide rails (left /right).

The four sides basket installation is completed.

Note: Pay attention to the installation size of multi-layer installation, so as not to have basket body pull-out interference after assembly. When installing the upper layer, press the top edge of the lower door panel as the reference.
